1. Introduction

This document describes the format of receiving Real-time status updates (notifications) about change in status of Headers and Content Templates. This URL must be updated on the portal, at Registration APIs → Real-time Status. You will receive Global status changes of all your Headers and Content Templates, irrespective of the registered DLT, i.e. you will receive status changes of all your Headers and Content Templates registered by you.

2. Callback Request

We send the status of header/content template whenever there is a change in Global Status in the below format to the call back URL mentioned on the portal.

Method: **POST**
